

vRealize Operations Management Pack for vCloud Director 5.0 Release Notes

vRealize Operations Management Pack for vCloud Director 5.0 Release Notes | Build 10154291
Last document update: 28 September 2018

The release notes include the following topics:

- [Introduction](#)
- [What's New](#)
- [Known Issues](#)

Introduction

You can use the Management Pack for vCloud Director with vRealize Operations Manager. The Management Pack for vCloud Director monitors the health of supported vCloud Director entities and sends early warning alerts for monitored Provider Virtual Data Center (VDC) objects.

What's New

vRealize Operations Management Pack for vCloud Director 5.0 introduces the following new features:

- **Additional storage elements:** The vCloud Director management pack can discover various catalog elements such as, media files, vApp templates from vCloud Director along with the associated organization vDC and storage capacity (GB).
- **Services associated with Edge Gateway:** Ability to collect the network services such as, distributed firewall, ipsec, dns and so on, associated with specific edge gateway. Also, provides the traffic statistics and status (if the service is enabled or disabled during a specific time)

Known Issues

- **Manual discovery times out in large vCloud adapter instances**

In large environments, when you attempt to manually discover a newly created vCloud Adapter instance, the manual discovery times out.

Workaround: None

- **All filters are collected in a specific vCloud Director environment**

Collections for a vCloud Director Management Pack instance can be restricted to the Provider VDCs available in the **Filter by Provider VDCs List** field. However, **Filter by Provider VDC** is not

applicable for External Network resource type. As a result, all external networks available in the specific vCloud Director environment are collected.

Workaround: None

- **Objects appear in both vCloud provider and vCloud tenant traversal**

Providing access to objects on one of the traversal spec list causes objects to appear in both vCloud provider and vCloud tenant traversal.

Workaround: None

- **First collection cycle of Management Pack for vCloud Director takes additional time to complete**

If the vCloud Director environment is large, the first collection cycle of Management Pack for vCloud Director might take time to complete and initiate first discovery of the environment.

Workaround: None
